

Riverside Community Health Collective

We are a 501(c)(3) nonprofit building an open-source, AI-assisted health navigation tool for rural communities. The project uses machine learning to help community health workers triage patient needs and connect people to local services. We are a small team (4 staff, 12 volunteers) based in rural Oregon, currently funded by a mix of small individual donations and one regional foundation grant ending this year.

We are seeking funding in the \$20,000 - \$150,000 range to:

- Hire one part-time data engineer
- Cover cloud/compute costs for the AI triage model
- Expand the program to two additional rural counties

Our focus areas: community health, health equity, applied AI/ML for social good, rural service delivery, open source software.
